## Name:

## HW5 - Due 03/05/2008 <br> ODE - spring 2008

1) Prove that if $C$ is a real non-singular n by n materix, then there exists a REAL matrix $A$ such that $e^{A}=C^{2}$
2) If $\phi$ is a solution of $x^{\prime \prime}+a(t) x^{\prime}+b(t) x=0$ such that $\phi$ does not vanish on an interval $I$. Find an independent solution of the interval $I$.
3) Find the general solution of each of the following systems :

$$
\begin{align*}
& \left\{\begin{array}{l}
x^{\prime}=2 x-y \\
y^{\prime}=2 y
\end{array}\right.  \tag{1}\\
& \left\{\begin{array}{l}
x^{\prime}=2 x-y \\
y^{\prime}=x+2 y
\end{array}\right.  \tag{2}\\
& \left\{\begin{array}{l}
x^{\prime}=-2 x \\
y^{\prime}=x-2 y \\
z^{\prime}=y-2 z
\end{array}\right. \tag{3}
\end{align*}
$$

4) Find the general solution of

$$
\left\{\begin{array}{l}
x^{\prime}=-y+t  \tag{4}\\
y^{\prime}=x
\end{array}\right.
$$
