This guide is meant to provide majors with a comprehensive picture of the offerings of the Mathematics Department. It contains information on courses, degree requirements, special programs, activities, prizes and awards. It supplements and repeats the information contained in the New York University Bulletin for the College of Arts and Sciences.

I. Welcome To The Mathematics Department

The undergraduate division of the Department of Mathematics offers a wide variety of courses in pure and applied mathematics. The faculty are members of the University's Courant Institute of Mathematical Sciences, noted for its advanced training and research programs, which emphasize the applications of mathematics to technology and other branches of science.

Joint programs are available in mathematics and (1) computer science, (2) economics, and (3) engineering. They lead to the B.A. in four years, with the exception of the engineering option, which leads to a joint B.S./B.S. degree from NYU and NYU Tandon School of Engineering. Additionally, an accelerated B.A. and M.S. degree in Mathematics, as well as an M.A. in Math Education with Steinhardt, from New York University in five years is offered. The department also provides an honors program in (1) mathematics and (2) mathematics and computer science for outstanding students. Additionally, independent study courses are available for students with special interests.

Required courses for all mathematics majors include MATH-UA 121 Calculus I, MATH-UA 122 Calculus II, MATH-UA 123 Calculus III, MATH-UA 140 Linear Algebra, MATH-UA 325 Analysis, and MATH-UA 343 Algebra (except the joint mathematics and economics major).

Mathematics majors are encouraged to spend a semester studying abroad at one of the many centers run by NYU Global Programs. Currently, mathematics can be studied at NYU Abu Dhabi, NYU Berlin, NYU Florence, NYU London, and NYU Shanghai.

II. Advising

Students intending to major in mathematics are urged to declare their major as early as possible and no later than the beginning of their junior year. Students can declare their major by completing a major declaration form which is found on the undergraduate mathematics website: http://www.math.nyu.edu/degree/undergrad/declaring.html.

The Undergraduate Advisement office for the Department is located in room 625 of Warren Weaver Hall. All matters concerning mathematics courses, mathematics majors and minors can be addressed here. When necessary, the Program Administrator will arrange appointments with the Director of Undergraduate Studies or Vice Chair of Undergraduate Affairs for advisement or academic counseling. Each mathematics major is assigned to a faculty advisor in the mathematics department. All declared mathematics majors must have their proposed course schedules approved each term by his/her faculty advisor. The approved schedule must be signed by their faculty advisor and delivered to the mathematics department administrative staff in room 625 or 627 for final clearance.
Students who believe that they are prepared to start their work in mathematics at an advanced level, or who feel qualified to enter a course without the formal prerequisites, should submit a documentation of prior college level coursework along with syllabuses to the Vice Chair of Undergraduate Affairs. Calculus placement exams are offered each semester.

III. Degree Programs

Requirements for all degree programs have changed effective Fall 2014. For each student, program requirements that must be adhered to are determined by the term in which the student enters NYU.

A. Major in Mathematics

1. Requirements for students entering NYU Fall 2014 or later
The requirements for the mathematics major are thirteen courses numbered MATH-UA 120 or higher. The only exceptions are MATH-UA 211, 212, and 213 Math for Economics I, II and III which are not open to anyone who has taken Calculus and are for Economics Majors and MATH-UA 270 which is only for Math Education students. The courses must include:

   a. **Calculus Requirement**
      - MATH-UA 121 Calculus I
      - MATH-UA 122 Calculus II
      - MATH-UA 123 Calculus III
      - MATH-UA 140 Linear Algebra

   b. **Analysis and Algebra Requirement**
      - MATH-UA 325 Analysis
      - MATH-UA 343 Algebra

Either of these courses can be substituted by its more intensive counterpart:

   - MATH-UA 328 Honors Analysis I
   - MATH-UA 348 Honors Algebra I
c. **Advanced Electives Requirement**

The rest of the 13 required courses must include at least three of the following:

- MATH-UA 233 Theory of Probability
- MATH-UA 234 Mathematical Statistics
- MATH-UA 252 Numerical Analysis
- MATH-UA 263 Partial Differential Equations
- MATH-UA 282 Functions of a Complex Variable
- MATH-UA 329 Honors Analysis II
- MATH-UA 349 Honors Algebra II
- MATH-UA 377 Differential Geometry
- MATH-UA 393 Honors I
- MATH-UA 394 Honors II
- MATH-UA 397 Honors III
- MATH-UA 398 Honors IV

*It is strongly suggested for students to take MATH-UA 325 Analysis before enrolling in MATH-UA 343 Algebra.*

In addition, the student must maintain a 2.0 mathematics GPA.

* Any two computer science courses (numbered CSCI-UA 101 or higher, except CSCI-UA 380) or graduate data science DS-GA courses may be credited toward the 13 course requirement. The prerequisites for DS-GA courses are Calculus III, Linear Algebra, and programming experience in Python (preferred) or MATLAB. Probability is useful, but not a required course prerequisite.

Students enrolled in and who complete the Premedical or Predental Program and who wish to major in mathematics may substitute at most two math classes by any two of the following; PHYS-UA 11 and 12 General Physics I and II or PHYS-UA 91 and 93 Physics I and II toward their 12 course requirement. However, if these physics courses are used towards the mathematics major, the computer science or data science courses will not apply towards the major. Students may double-count no more than two courses towards both the Mathematics Major and the
requirements of another major or minor. Courses taken under the pass/fail option are not counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

2. Requirements for students who entered NYU Fall 2012 – Summer 2014

a. Calculus Requirement
   - MATH-UA 121 Calculus I
   and either the following three courses:
     - MATH-UA 122 Calculus II
     - MATH-UA 123 Calculus III
     - MATH-UA 140 Linear Algebra
   or the two intensive courses:
     - MATH-UA 221 Honors Calculus I
     - MATH-UA 222 Honors Calculus II

b. Analysis and Algebra Requirement
   - MATH-UA 325 Analysis
   - MATH-UA 343 Algebra
   Either of these courses can be substituted by its more intensive counterpart:
     - MATH-UA 328 Honors Analysis I
     - MATH-UA 348 Honors Algebra I

c. Advanced Electives Requirement
   The rest of the 12 required courses must include at least two of the following:
     - MATH-UA 326 Analysis II or MATH-UA 329 Honors Analysis II
     - MATH-UA 344 Algebra II or MATH-UA 349 Honors Algebra II
     - MATH-UA 224 Vector Analysis
- MATH-UA 233 Theory of Probability
- MATH-UA 252 Numerical Analysis
- MATH-UA 263 Partial Differential Equations
- MATH-UA 282 Functions of a Complex Variable
  
  AND

- Four Electives to a total of 12 courses

*It is strongly suggested for students to take MATH-UA 325 Analysis before enrolling in MATH-UA 343 Algebra.*

In addition, the student must maintain a 2.0 mathematics GPA.

* Any two computer science courses numbered CSCI-UA 101 or higher, except CSCI-UA 380, may be credited toward the 12 course requirement. Students enrolled in and who complete the Premedical or Predental Program and who wish to major in mathematics may substitute at most two math classes by any two of the following; PHYS-UA 11 and 12 General Physics I and II or PHYS-UA 91 and 93 Physics I and II toward their 12 course requirement. However, if these physics courses are used towards the mathematics major, the computer science courses will not apply towards the major. Students may double-count no more than two courses towards both the Mathematics Major and the requirements of another major or minor. Courses taken under the pass/fail option are not counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

3. Requirements for students who entered NYU before Fall 2012

  a. **Calculus Requirement**

     - MATH-UA 121 Calculus I

     and either the following three courses:

     - MATH-UA 122 Calculus II
     - MATH-UA 123 Calculus III
     - MATH-UA 140 Linear Algebra

     or the two intensive courses:

     - MATH-UA 221 Honors Calculus I
b. Analysis and Algebra Requirement
   - MATH-UA 325 Analysis I
   - MATH-UA 343 Algebra

   c. Advanced Electives Requirement
   The rest of the 12 required courses must include at least one of the following:
   - MATH-UA 326 Analysis II
   - MATH-UA 344 Algebra II
   - MATH-UA 224 Vector Analysis

   In addition, the student must maintain a 2.0 mathematics GPA.

   * Any two computer science courses numbered CSCI-UA 101 or higher, except CSCI-UA 380, may be credited toward the 12 course requirement. Students who complete the Pre-medical or Pre-dental Program and who wish to major in mathematics may count any two of the following courses toward their 12 course mathematics requirement: PHYS-UA 11 and 12 General Physics I and II or PHYS-UA 91 and 93 Physics I and II. However, if these physics courses are used towards the mathematics major, the computer science courses will not apply towards the major. Students may double-count no more than two courses towards both the Mathematics Major and the requirements of another major or minor. Courses taken under the pass/fail option cannot be counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

   B. Joint Major in Mathematics and Computer Science
   An interdisciplinary major offered jointly by the Department of Mathematics and Computer Science, provides the opportunity to study both computer science and relevant mathematics courses such as analysis, algebra, probability, and statistics. Students must complete one CSCI-UA course with a recorded grade of C or better before they can declare this joint major (this policy applies to all NYU students, not just to those matriculated in CAS).

   1. Requirements for students entering NYU Fall 2014 or later
      a. Mathematics Requirements
The requirements are ten courses numbered MATH-UA 120 or higher, except MATH-UA 211, 212, 213 or 270 from the Mathematics Department, which must include:

- MATH-UA 120 Discrete Math
- MATH-UA 121 Calculus I
- MATH-UA 122 Calculus II
- MATH-UA 123 Calculus III
- MATH-UA 140 Linear Algebra
- MATH-UA 325 Analysis or MATH-UA 328 Honors Analysis I
- MATH-UA 343 Algebra or MATH-UA 348 Honors Algebra I

The rest of the 10 required courses must include two of the following:

- MATH-UA 233 Theory of Probability
- MATH-UA 234 Mathematical Statistics
- MATH-UA 251 Mathematical Modeling
- MATH-UA 252 Numerical Analysis
- MATH-UA 263 Partial Differential Equations
- MATH-UA 282 Functions of a Complex Variable
- MATH-UA 329 Honors Analysis II
- MATH-UA 349 Honors Algebra II
- MATH-UA 377 Differential Geometry

b. **Computer Science Requirements**
Eight computer science courses as required for the major in that department. Please refer to the undergraduate computer science website for information on computer science courses:

http://www.cs.nyu.edu/webapps/content/academic/undergrad/majors

* Students may double-count no more than two courses towards both the Joint Major in Mathematics and Computer Science and
the requirements of another major or minor. Courses taken under the pass/fail option cannot be counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

2. Requirements for students who entered NYU Fall 2012 – Summer 2014

a. Mathematics Requirements
The requirements are ten courses numbered MATH-UA 120 or higher from the Mathematics Department, which must include:

- MATH-UA 120 Discrete Math
- MATH-UA 121 Calculus I
- MATH-UA 122 Calculus II
- MATH-UA 123 Calculus III
- MATH-UA 140 Linear Algebra
- MATH-UA 325 Analysis or MATH-UA 328 Honors Analysis I
- MATH-UA 343 Algebra or MATH-UA 348 Honors Algebra I

The rest of the 10 required courses must include two of the following:

- MATH-UA 326 Analysis II or MATH-UA 329 Honors Analysis II
- MATH-UA 344 Algebra II or MATH-UA 349 Honors Algebra II
- MATH-UA 224 Vector Analysis
- MATH-UA 233 Theory of Probability
- MATH-UA 252 Numerical Analysis
- MATH-UA 263 Partial Differential Equations
- MATH-UA 282 Functions of a Complex Variable

b. Computer Science Requirements
Eight computer science courses as required for the major in that department. Please refer to the undergraduate
computer science website for information on computer science courses:

http://www.cs.nyu.edu/webapps/content/academic/undergrad/majors

* Students may double-count no more than two courses towards both the Joint Major in Mathematics and Computer Science and the requirements of another major or minor. Courses taken under the pass/fail option cannot be counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

3. Requirements for students who entered NYU before Fall 2012

   a. **Mathematics Requirements**
      The mathematics requirements are ten courses numbered MATH-UA 120 or higher from the Mathematics Department, which must include MATH-UA 325 Analysis I and MATH-UA 343 Algebra I; MATH-UA 246 Intro to Abstract Algebra cannot be counted if MATH-UA 343 Algebra I is applied toward the major. The remaining mathematics courses must include one of the following: MATH-UA 326 Analysis II, MATH-UA 344 Algebra II, or MATH-UA 224 Vector Analysis.

   b. **Computer Science Requirements**
      Eight computer science courses are required for the major. Please refer to the undergraduate computer science website for more information about the computer science courses:

      http://www.cs.nyu.edu/webapps/content/academic/undergrad/majors

      * Students may double-count no more than two courses towards both the Joint Major in Mathematics and Computer Science and the requirements of another major or minor. Courses taken under the pass/fail option cannot be counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

C. **Joint Major in Mathematics and Economics**
   An interdisciplinary major offered jointly by the Departments of Mathematics and Economics, providing the opportunity to study economics, and in mathematics, analysis, statistics, and operations research. Please note: Students in the joint mathematics/economics major may only take the theory sequence.
1. Requirements for students entering NYU Fall 2014 or later

a. Mathematics Requirements
   The requirements are nine courses numbered MATH-UA 120 or higher from the Mathematics Department, which must include:
   - MATH-UA 211 Math for Economics I or MATH-UA 121 Calculus I
   - MATH-UA 212 Math for Economics II or MATH-UA 122 Calculus II
   - MATH-UA 213 Math for Economics III or MATH-UA 123 Calculus III
   - MATH-UA 140 Linear Algebra
   - MATH-UA 325 Analysis or MATH-UA 328 Honors Analysis I

   *The Math for Economics sequence is the preferred sequence for this major, although we will accept either Math for Economics or Calculus. Students must complete one of the sequences and courses from the other sequence may not be applied to the same degree program. Students may not register simultaneously for separate courses within the two sequences.

   Plus four chosen from:
   - MATH-UA 233 Theory of Probability
   - MATH-UA 234 Mathematical Statistics
   - MATH-UA 235 Probability & Statistics
   - MATH-UA 240 Combinatorics
   - MATH-UA 248 Theory of Numbers
   - MATH-UA 250 Mathematics of Finance
   - MATH-UA 251 Mathematical Modeling
   - MATH-UA 252 Numerical Analysis
   - MATH-UA 262 Ordinary Differential Equations
   - MATH-UA 263 Partial Differential Equations
   - MATH-UA 264 Chaos & Dynamical Systems
• MATH-UA 282 Functions of a Complex Variable
• MATH-UA 329 Honors Analysis II
• MATH-UA 343 Algebra or MATH-UA 348 Honors Algebra I

b. Economics Requirements
The economics requirements are ECON-UA 1, 2, 11, 13, 20, 266, plus any three economics elective courses, two of which must be theory electives numbered ECON-UA 3XX. Please refer to the undergraduate economics website for information on economics courses:

http://econ.as.nyu.edu/object/economics.1214.ug.req#major

* Students may double-count no more than two courses towards both the Joint Major in Mathematics and Economics and the requirements of another major or minor. Courses taken under the pass/fail option cannot be counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

2. Requirements for students who entered NYU Fall 2013 – Summer 2014

a. Mathematics Requirements
The requirements are a total of nine courses, which must include:

• MATH-UA 211 Math for Economics I or MATH-UA 121 Calculus I
• MATH-UA 212 Math for Economics II or MATH-UA 122 Calculus II
• MATH-UA 213 Math for Economics III or MATH-UA 123 Calculus III
• MATH-UA 140 Linear Algebra
• MATH-UA 325 Analysis or MATH-UA 328 Honors Analysis I

*The Math for Economics sequence is the preferred sequence for this major, although we will accept either Math for Economics or Calculus. Students must complete one of the sequences and courses from the other sequence may
not be applied to the same degree program. Students may not register simultaneously for separate courses within the two sequences.

Plus four chosen courses from:

- MATH-UA 141 Honors Linear Algebra
- MATH-UA 224 Vector Analysis
- MATH-UA 233 Theory of Probability
- MATH-UA 234 Mathematical Statistics
- MATH-UA 235 Probability & Statistics
- MATH-UA 262 Ordinary Differential Equations
- MATH-UA 240 Combinatorics
- MATH-UA 263 Partial Differential Equations
- MATH-UA 264 Chaos & Dynamical Systems
- MATH-UA 248 Theory of Numbers
- MATH-UA 250 Mathematics of Finance
- MATH-UA 252 Numerical Analysis
- MATH-UA 270 Transformations & Geometries
- MATH-UA 282 Functions of a Complex Variable
- MATH-UA 326 Analysis II or MATH-UA 329 Honors Analysis II
- MATH-UA 343 Algebra or MATH-UA 348 Honors Algebra I
- MATH-UA 344 Algebra II or MATH-UA 349 Honors Algebra II

b. **Economics Requirements**

The economics requirements are ECON-UA 1, 2, 11, 13, 20, 266, plus any two economics elective courses, which must be theory electives numbered ECON-UA 3XX and one which must be numbered ECON-UA 2XX. Please refer to the undergraduate economics website for information on economics courses:

http://econ.as.nyu.edu/object/economics.1214.ug.req#major
Students may double-count no more than two courses towards both the Joint Major in Mathematics and Economics and the requirements of another major or minor. Courses taken under the pass/fail option cannot be counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

3. Requirements for students who entered NYU before Fall 2013

a. **Mathematics Requirements**
The mathematics requirements are nine courses consisting of MATH-UA 121 – 123 Calculus I, II, III, MATH-UA 140 Linear Algebra, MATH-UA 325 Analysis I, plus four courses chosen below:

- MATH-UA 224 Vector Analysis
- MATH-UA 235 Probability & Statistics
- MATH-UA 240 Combinatorics
- MATH-UA 141 Honors Linear Algebra
- MATH-UA 343, 344 Algebra I, II
- MATH-UA 234 Mathematical Statistics
- MATH-UA 252 Numerical Analysis
- MATH-UA 282 Functions of a Complex Variable
- MATH-UA 262 Ordinary Differential Equations
- MATH-UA 363 Partial Differential Equations
- MATH-UA 264 Chaos & Dynamical Systems
- MATH-UA 248 Theory of Numbers
- MATH-UA 233 Theory of Probability
- MATH-UA 250 Mathematics of Finance
- MATH-UA 270 Transformations & Geometries
- MATH-UA 326 Analysis II

b. **Economics Requirements**
The economics requirements are 9 courses in Economics including:

- ECON-UA 5, ECON-UA 6, ECON-UA 11, ECON-UA 13, ECON-UA 20, ECON-UA 266, plus any three economics elective courses, at least two of which must be theory electives numbered ECON-UA 300 to ECON-UA 399.

Please refer to the undergraduate economics website for more information about the economics courses:

http://econ.as.nyu.edu/object/economics.1214.ug.req#major.

* Students may double-count no more than two courses towards both the Joint Major in Mathematics and Economics and the requirements of another major or minor. Courses taken under the pass/fail option cannot be counted toward the major. A grade of C or better is required in all courses used to fulfill the major requirement.

**D. Mathematics Minor**
The requirements for a mathematics minor are four courses in the department numbered MATH-UA 120 or higher. Courses from the
sequences MATH-UA 121-123 Calculus I-III and MATH-UA 211-213 Math for Economics I-III may not both be applied to the mathematics minor. Although courses transferred from other colleges may count towards the minor, at least two courses for the minor must be taken at NYU. Students pursuing majors that require mathematics courses may follow this minor, as long as two of the four courses do not apply simultaneously to the requirements for their major. Courses taken under the pass/fail option are not counted toward the minor. A grade of C or better is required in all courses to count toward the minor.

E. Joint Mathematics and Computer Science Minor
The requirements are the four courses MATH-UA 121, MATH-UA 122, CSCI-UA 101 and CSCI-UA 102. Students must complete one CSCI-UA course with a recorded grade of C or better before they can declare this joint minor (this policy applies to all NYU students, not just to those matriculated in CAS). At most one mathematics course in the joint minor may be transferred from other colleges. Students who wish to double-count courses for the math portion of the minor and another requirement may count at most two such courses toward the minor. Courses taken under the pass/fail option are not counted toward the minor. A grade of C or better is required in all courses to count toward the minor.

F. Advanced Mathematical Methods Minor
The Advanced Mathematical Methods Minor (for Stern undergraduates only) provides students with mathematical tools to handle complex business problems. The requirements are MATH-UA 140, STAT-UB 14, MATH-UA 252 or MATH-GA 2010, and one of these advanced courses: MATH-UA 262, MATH-UA 263, STAT-UB 15, STAT-UB 21, or MATH-UA 325. Note: All students must take at least one Stern course in order to meet minor requirements. If a student has completed the CAS version of Probability, STAT-UB 14 should not be taken. Instead, please select one of the following: STAT-UB 15 or STAT-UB 21. Students who have the equivalent of MATH-UA 140 should substitute a more advanced course from the list above.

G. Mathematics Education Minor for Mathematics Majors
The Mathematics Education Minor (for Mathematics Majors) enables you to complete coursework as an undergraduate in CAS that will reduce the number of credits required of a Steinhardt School of Education M.A. degree in Teachers of Mathematics, Grades 7-12 that will fulfill the requirements for Initial teacher certification. The master's degree will require 30 credits including student teaching internships beyond the bachelor’s degree.

It is recommended that you declare the minor and begin taking these courses during your first semester of junior year. Most of these courses require a fieldwork component consisting of classroom observation and
participation. For course descriptions, please see the current Steinhardt School of Education's Undergraduate website at: http://steinhardt.nyu.edu/teachlearn/minors/general

H. B.S./B.S. Program in Engineering
The College of Arts and Science, in cooperation with the NYU Tandon School of Engineering, offers a joint B.S./B.S. program in engineering. Students in the program receive the B.S. degree in mathematics and the B.S. degree in either civil, computer, electrical or mechanical engineering. The joint mathematics/engineering students must complete the 13-course mathematics requirement. Students are allowed to substitute CSCI-UA 101, 102 Computer Science I, II, or PHYS-UA 91, 93 Physics I, II for a maximum of two mathematics classes. Further information is available from Mr. Tyrell Davis, advisor for the B.S./B.S. program, in the College Advising Center, Silver Center, 100 Washington Square East, Room 905; 212-998-8133.

I. B.A./M.S. Program in Mathematics
New York University has introduced a program that allows students to obtain a Mathematics Bachelor’s and Master’s degree in five years. The program is suited to students who have decided not to enter a Ph.D. program at this time but who would like to increase their skills before entering the job market. Qualifying students are accepted into a program toward the end of the sophomore year or during their junior year before they reach 96 credits. Students must earn a minimum of a 3.50 GPA in order to qualify for acceptance into the joint B.A. /M.S. During the last few undergraduate semesters, students should accelerate by taking one quarter of their graduate courses during regular terms and/or during the summer. In the graduate portion of the program, they can qualify for a scholarship covering up to 50 percent of the tuition for the master’s degree. For more information, please contact Associate Director, Juniors and Inter-School Programs, Brendan Sullivan at Brendan.m.sullivan@nyu.edu or (212) 998-3748.

J. B.A./M.A. Program in Mathematics/Teacher Education
Students in Mathematics can complete both their Bachelor’s degree and a Master’s degree in Teaching (grades 7 - 12) in just 5 years. In addition to saving money by completing the MA at an accelerated pace, students in this dual degree program receive a generous scholarship toward the MA degree. The scholarship typically covers 30% of graduation tuition and may cover more depending on the program of study and availability of external funds. For more information, please contact Associate Director, Juniors and Inter-School Programs, Brendan Sullivan at Brendan.m.sullivan@nyu.edu or (212) 998-3748.
IV. Honors Program

A. Mathematics Honors Major
The Honors Program is designed for students with a strong commitment to mathematics. It is recommended for students who intend to pursue graduate study in mathematics.

1. Requirements for students entering NYU Fall 2014 or later

Beyond the major core requirements, which are MATH-UA 121, 122, 123, Calculus I, II, and III, and MATH-UA 140, Linear Algebra, an honors major must take four of the following courses: MATH-UA 328, 329 Honors Analysis I, II; MATH-UA 348, 349 Honors Algebra I, II; or MATH-UA 393, 394, 397, 398 Honors, I-IV.

Students must also complete a senior research project and present it at the DURF presentations in the spring. Students should register for two semesters of MATH-UA 997, 998 independent study under faculty supervision. Students should seek approval of their research project from the Faculty Honors Advisor, Director of Undergraduate Studies or Vice Chair of Undergraduate Affairs. The research project can also be completed through the mathematics summer research program (S.U.R.E.). Students who participate in this program are required to present their research at the undergraduate research forum in the fall semester of their senior year.

Students seeking admission into the honors program must: 1) Maintain a grade point average of 3.65 or higher in the major sequence (including Honors requirements), 2) Obtain department approval. Interested students can consult with the Undergraduate Program Administrator, Alison Entin at entin@cims.nyu.edu.

2. Requirements for students who entered NYU before Fall 2014

Beyond the major core requirements, which are MATH-UA 121, 122, 123, Calculus I, II, and III, and MATH-UA 140, Linear Algebra, an honors major must take: MATH-UA 325, 326 Analysis, Analysis II (or MATH-UA 328, 329 Honors Analysis I, II) and MATH-UA 343, 344 Algebra, Algebra II (or MATH-UA 348, 349 Honors Algebra I, II), both usually taken during the junior year; two of the following: MATH-UA 393, 394, 397, 398 Honors, I-IV, are usually taken in the senior year; and three electives, numbered MATH-UA 120 or higher. Students had the option of enrolling in Honors Calculus I and II, if they met the necessary prerequisites. However, Honors Calculus I and II are not mandatory for participation in the honors program.
Students must also complete a senior research project. Students should register for two semesters of MATH-UA 997, 998 independent study under faculty supervision. Students should seek approval of their research project from the Director of Undergraduate Studies or Vice Chair of Undergraduate Affairs. The research project can also be completed through the mathematics summer research program (S.U.R.E.). Students who participate in this program are required to present their research at the undergraduate research forum in the fall semester of their senior year.

Students seeking admission into the honors program must: 1) Maintain a grade point average of 3.65 or higher in the major sequence (including Honors requirements), 2) Obtain department approval. Interested students can consult with the Undergraduate Program Administrator, Alison Entin at entin@cims.nyu.edu.

B. Joint Honors in Mathematics and Computer Science
This is an interdisciplinary major offered by the Department of Mathematics and the Department of Computer Science.

1. Mathematics Requirements
   - MATH-UA 121, 122, 123 Calculus I, II, III
   - MATH-UA 140 Linear Algebra
   - MATH-UA 325 or 328 Analysis or Honors Analysis I
   - MATH-UA 329 Honors Analysis II
   - MATH-UA 343 or 348 Algebra or Honors Algebra I
   - MATH-UA 349 Honors Algebra II
   - Two of MATH-UA 393, 394, 397 or 398 Honors I, II, III, IV

2. Computer Science Requirements
The computer science requirements include: CSCI-UA 101, CSCI-UA 102, CSCI-UA 201, CSCI-UA 202, CSCI-UA 310, CSCI-UA 421, CSCI-UA 453, and three computer science courses listed at the CSCI-UA 400 level.

Students should complete a guided research, sponsored by either department and presented at the Dean’s Undergraduate Research Forum which takes places in late April. Students are expected to dedicate 10-20 hours per week toward their research.
V. Transfer Students

Transfer students who have taken mathematics courses at other colleges should consult the Vice Chair for Undergraduate Affairs as soon as possible to determine proper placement. They should bring copies of their transcripts along with syllabi including course description, schedule of topics, assessment plan, and textbook title and author for all mathematics courses taken elsewhere. Transfer courses that are to be counted toward major or optional minor requirements must be judged equivalent to courses currently taught by the mathematics department. Credit cannot be transferred for courses in which a majority of the assessment is conducted in a distance-learning environment. Official transcripts must also be sent to the University registrar's office.

To graduate with a major in mathematics, transfer students must complete at least 12 eligible mathematics courses, each with grade of C or better. At least half the courses comprising the major must be taken in the College of Arts and Science at New York University during two or more semesters. For the minor in mathematics, at least two of the four required mathematics courses must be taken in residence at the College of Arts and Science at New York University, and cannot be applied towards major or minor requirements in other departments.
## VI. Courses Offered in Academic Year 2016 – 2017

• **MATH-UA 393-394** Honors topics are announced and posted in advance.
• **MATH-UA 211, 212, 213 and 270** do not count towards the Math Major degree.
• **MATH-UA 211, 212, and 213** are for Economics Majors (if they are double majoring in Math they may use these instead of Calculus I - III)
VII. Suggested Course Programs

The programs shown below are suggestions only. Many students will take more mathematics electives than are listed in these programs.

A. Possible program for mathematics majors:

<table>
<thead>
<tr>

Students with advanced standing should begin their freshman year at the appropriate level. Highly qualified students are encouraged to take graduate mathematics courses provided they satisfy the prerequisites and obtain
VIII. Activities

A. Mathematics Society
   There is an active mathematics society open to all students interested in
   the study of mathematics. An organizational meeting is held shortly
   after classes begin in the fall to plan for the coming academic year.
   Activities include talks by faculty and guest speakers on a variety of
   topics including mathematics and career opportunities as well as
   attending conferences. The club is under the supervision of Vice Chair
   Matthew Leingang.

B. Association for Women in Mathematics
   The mission and purpose of AWM – NYU Chapter is to increase interest
   in the mathematical sciences and their applications in various industries.
   More specifically, it focuses on mentoring, encouraging and bringing
   together women undergraduates in mathematics to increase visibility of
   women and their contributions in the discipline.

C. William Lowell Putnam Competition
   The mathematics department participates in the annual William Lowell
   Putnam Competition, a mathematics competition open to all
   undergraduate mathematics students in the U.S.A. and Canada.
   Interested students should contact the department as early as possible
   in the school year since the contest takes place in early December. A
   series of preparation sessions is held under the supervision of
   mathematics faculty.

D. Mathematical Contest in Modeling
   MCM is a contest where teams of undergraduates use mathematical
   modeling to present their solutions to real world problems. Interested
   students should contact the department as early as possible in the
   school year.

E. Interdisciplinary Contest in Modeling
   The Interdisciplinary Contest in Modeling (ICM) is an international
   contest for high school students and college undergraduates. ICM is an
   extension of the Mathematical Contest in Modeling (MCM). It is
   designed to develop and advance interdisciplinary problem-solving
   skills as well as competence in written communication. Registration for
   ICM is via MCM.

F. Peer Mentor Program
   The mathematics department has an active peer mentor program for
   mathematics majors. The program is designed to assist new
   mathematics majors in making the transition to the mathematics major
   and life at NYU. If you're interested in becoming a mentor or mentee
please send an email to entin@cims.nyu.edu.

G. Study Abroad
NYU undergraduates can spend a semester studying abroad at one of the many centers run by NYU Global Programs. Currently, mathematics can be studied at NYU Berlin, NYU London, NYU Abu Dhabi, and NYU Shanghai. If you are interested in participating in any of these programs, please contact the study abroad office.

H. S.U.R.E. Program
Since the spring 2000 semester the Mathematics Department has sponsored a number of summer research experiences (S.U.R.E.) for a selected number of undergraduate math majors. The Summer Undergraduate Research Experience is aimed at advanced undergraduate math students in their junior year. The project ends with a written report and an oral presentation in the beginning of the fall semester. Funds to support this activity are limited and student participants are chosen by a faculty committee based on grades, coursework, and fit between their research interests and those of the supervising faculty. Applications are considered more highly if students have found a faculty mentor and research topic.

IX. Awards

A. Prizes
Every spring the mathematics department presents awards to exceptional students in the department.

- The Mathematics Award is presented to a graduating senior for excellence in mathematics and service to the department and fellow students; and to members of the junior class for meritorious service, or for excellence in mathematics
- The Hollis Cooley Memorial Prize is awarded for excellence and exceptional promise in mathematics.
- The Perley Lenwood Thorne Medal, endowed by the faculty to honor Professor Thorne at the time of his retirement in 1949, is awarded for outstanding scholarship in mathematics.
- Mathematics Awards for Academic Achievement are presented to graduating seniors for academic excellence in mathematics.

B. Scholarships and Grants
New York University sponsors and administers a wide variety of financial aid programs, including its own scholarship and grant funds and some New York State and Federal funds. For additional information, refer to the College of Arts and Science Bulletin.
X. Work Opportunities in the Mathematics Department

A. Tutoring
The department offers paid undergraduate tutoring positions for advanced mathematics majors. Tutors provide free tutoring for undergraduate students taking lower level mathematics courses. Preferred applicants have completed and received an A in Calculus I, II, III, Linear Algebra, and Analysis.

B. Grading
Paid grader positions are available for advanced mathematics majors. Students grade homework problems for undergraduate mathematics courses. Preferred applicants have completed and received at least an A in Calculus I, II, III, and Linear Algebra.

Applications are available online at http://math.nyu.edu/degree/undergrad/opportunities.html

XI. Course Descriptions

Listed below are descriptions of all mathematics courses that satisfy the major and minor requirements. Some of the courses are given only in the fall, others only in the spring, a few are given once every other year, and some only on request. However, any course may be scheduled if there is sufficient demand.

MATH-UA 9 Algebra and Calculus (offered each term) – 4 points
Prerequisites:
High school mathematics or permission of the department.

An intensive course in intermediate algebra and trigonometry. Topics include algebraic, exponential, logarithmic, and trigonometric functions and their graphs.

MATH-UA 120 Discrete Mathematics (offered each term) – 4 points
Prerequisite:
A grade of C or higher in MATH-UA 121 Calculus I or MATH-UA 212 Math for Economics II (for Economics Majors), or permission of the department.

MATH-UA 121 Calculus I (offered each term) – 4 points
Prerequisite:
   a. a score of 650 or higher on the mathematics portion of the SAT
b. a score of 650 or higher on the SAT Subject Test in Mathematics 1
c. a score of 650 or higher on the SAT Subject Test in Mathematics 2
d. an ACT mathematics score of 30 or higher
e. a score of 3 or higher on the AP Calculus AB exam
f. a score of 3 or higher on the AP Calculus BC exam
g. A level Maths score of C or higher (anyone who took Further Maths should contact the math department as it varies depending on the exam board)
h. AS level Maths score of B or higher
i. IB HL score of 5 or higher
j. IB SL score of 6 or higher
k. a grade of C or higher in MATH-UA 9 Algebra and Calculus

OR

A passing score on a departmental placement exam

Derivatives, antiderivatives, and integrals of functions of one real variable. Trigonometric, inverse trigonometric, logarithmic and exponential functions. Applications, including graphing, maximizing and minimizing functions. Areas and volumes.

MATH-UA 122 Calculus II (offered each term) – 4 points
Prerequisite:
  a. a score of 4 or higher on the AP Calculus AB exam, or
  b. a score of 4 or higher on the AP Calculus BC exam, or
  c. A level Maths score of B or higher (anyone who took Further Maths should contact the math department as it varies depending on the exam board)
  d. IB HL of 6 or higher
  e. a grade of C or higher in MATH-UA 121 Calculus I

OR

A passing score on a departmental placement exam

MATH-UA 123 Calculus III (offered each term) – 4 points
Prerequisite:
  a. a score of 5 on the AP Calculus BC exam
  b. a grade of C or higher in MATH-UA 122 Calculus II

OR

A passing score on a departmental placement exam

An Honors section of this course will be offered in the spring 2017 semester. Students must have an A in Calculus II or an AP exam that passes them out of Calculus and department permission to enroll.

Functions of several optimization and variables. Vectors in the plane and space. Partial derivatives with applications, especially Lagrange multipliers.

**MATH-UA 140 Linear Algebra (offered each term) – 4 points**

**Prerequisite:**
A grade of C or higher in MATH-UA 121 Calculus I or MATH-UA 211 Math for Economics I (for Economics majors) or equivalent.

An Honors section of this course will be offered in the fall 2016 and spring 2017 semesters. Students must have an A- in Calculus I, MFE I or an AP exam that passes them out of Calculus and department permission to enroll.

**MATH-UA 144 Introduction to Computer Simulation (offered spring term) – 4 points (Identical to CSCI-UA 330)**

**Prerequisite:**
A grade of C or higher in MATH-UA 121 Calculus I or MATH-UA 212 Math for Economics II (for Economics majors) and PHYS-UA 11 General Physics.

In this course, students will learn how to do computer simulations of such phenomena as orbits (Kepler problem and N-body problem), epidemic and endemic disease (including evolution in response to the selective pressure of a malaria), musical stringed instruments (piano, guitar, and violin), and traffic flow in a city (with lights, breakdowns, and gridlock at corners). The simulations are based on mathematical models, numerical methods, and Matlab programming techniques that will be taught in class. The use of animations (and sound where appropriate) to present the results of simulations will be emphasized.

**MATH-UA 211, 212 Mathematics for Economics I and II (offered each term) – 4 points**

**Prerequisite for MATH-UA 211**
The same as for MATH-UA 121 Calculus I.

**Prerequisite for MATH-UA 212**
A grade of C or higher in MATH-UA 211.

**NOTE:** Cannot apply both Calculus courses and Math for Economics courses to your major. Economics majors pursuing a double major in mathematics may substitute MATH-UA 211, 212 for the regular calculus sequence and must complete MATH-UA 213 as well.

Elements of calculus and linear algebra with examples and motivation drawn from important topics in economics. Topics include derivatives of functions of one and several variables; interpretations of the derivatives; convexity; constrained and unconstrained optimization; series, including geometric and Taylor series; ordinary differential equations; matrix algebra; eigenvalues; and
(if time permits) dynamic optimization and multivariable integration.

**MATH-UA 213 Mathematics for Economics III (offered each term) – 4 points**

*Prerequisite:*
A grade of C or higher in MATH-UA 212 Math for Economics II.

Further topics in vector calculus. Vector spaces, matrix analysis. Linear and nonlinear programming with applications to game theory. This course will provide economics students who have taken MATH-UA 211 Mathematics for Economics I and MATH-UA 212 Mathematics for Economics II with the tools to take higher-level mathematics courses.

**MATH-UA 224 Vector Analysis (offered spring term) – 4 points**

*Prerequisite:*
A grade of C or higher in MATH-UA 325 Analysis.

Brief review of multivariate calculus: partial derivatives, chain rule, Riemann integral, change of variables, line integrals. Lagrange multipliers. Inverse and implicit function theorems and their applications. Introduction to calculus on manifolds: definition and examples of manifolds, tangent vectors and vector fields, differential forms, exterior derivative, line integrals and integration of forms. Gauss’ and Stokes’ theorems on manifolds.

**MATH-UA 228 Earth’s Atmosphere and Ocean: Fluid Dynamics and Climate – 4 points (Identical to ENVST-UA 360)**

*Prerequisite:*
A grade of B- or higher in MATH-UA 121 Calculus I or MATH-UA 212 Math for Economics II (for Economics majors) or equivalent and familiarity with introductory physics (at least at the advanced high school level).

*Recommended and Preferred: MATH-UA 123 Calculus III*

Introduction to dynamical processes that drive the circulation of the atmosphere and ocean, and their interaction. Goal of the lectures is to develop an understanding of the unifying principles of planetary fluid dynamics. Topics include the global energy balance, convection and radiation (the greenhouse effect), effects of planetary rotation (the Coriolis force), structure of the atmospheric circulation (the Hadley cell and wind patterns), structure of the oceanic circulation (wind-driven currents and the thermohaline circulation), and climate and climate variability (including El Niño and anthropogenic warming).

**MATH-UA 230 Introduction to Fluid Dynamics (offered spring term) – 4 points (Identical to PHYS-UA 180)**

*Prerequisite:*
A grade of C or higher in MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors)
Suggested:
PHYS-UA 106 Mathematical Physics

Fluid dynamics is the branch of physics that describes motions of fluids as varied as the flow of blood in the human body, the flight of an insect or the motions of weather systems on Earth. The course introduces the key concepts of fluid dynamics: the formalism of continuum mechanics, the conservation of mass, energy and momentum in a fluid, the Euler and Navier-Stokes equations, viscosity and vorticity. These concepts are applied to study classic problems in fluid dynamics, such as potential flow around a cylinder, the Stokes flow, the propagation of sound and gravity waves and the onset of instability in shear flow.

MATH-UA 233 Theory of Probability (offered in the fall and spring terms) – 4 points
Prerequisite:
A grade of C or higher in MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) or equivalent, and a grade of C or higher in MATH-UA 140 Linear Algebra or equivalent.

NOTE: Not open to students who have taken MATH-UA 235 Probability and Statistics. This course is intended for math majors and other students with a strong interest in mathematics. It requires fluency in topics such as multi-variable integration and therefore a grade of B or better in MATH-UA 123 or MATH-UA 213 (or the equivalent) is strongly recommended.

An introduction to the mathematical treatment of random phenomena occurring in the natural, physical, and social sciences. Axioms of mathematical probability, combinatorial analysis, binomial distribution, Poisson and normal approximation, random variables and probability distributions, generating functions, Markov chains, applications.

MATH-UA 234 Mathematical Statistics (offered spring term) – 4 points
Prerequisite:
A grade of C or higher in MATH-UA 233 Theory of Probability or equivalent.

NOTE: Not open to students who have taken MATH-UA 235 Probability and Statistics.

An introduction to the mathematical foundations and techniques of modern statistical analysis for the interpretation of data in the quantitative sciences. Mathematical theory of sampling; normal populations and distributions; chi-square, t, and F distributions; hypothesis testing; estimation; confidence intervals; sequential analysis; correlation, regression; analysis of variance. Applications to the sciences.

MATH-UA 235 Probability and Statistics (offered spring term) – 4 points
Prerequisite:
A grade of C or higher in MATH-UA 122 Calculus II or MATH-UA 212 Math for Economics II (for Economics majors) or equivalent.

**NOTE:** Not open to students who have taken MATH-UA 233 Theory of Probability.

A combination of MATH-UA 233 and MATH-UA 234 at a more elementary level, so as to afford the student some acquaintance with both probability and statistics in a single term. In probability: mathematical treatment of chance; combinatorics; binomial, Poisson, and Gaussian distributions; law of large numbers and the normal approximation; application to coin-tossing, radioactive decay, etc. In statistics: sampling; normal and other useful distributions; testing of hypotheses; confidence intervals; correlation and regression; applications to scientific, industrial, and financial data.

**MATH-UA 240 Combinatorics (offered spring term) – 4 points**

**Prerequisite:**
A grade of C or higher in MATH-UA 122 Calculus II or MATH-UA 212 Math for Economics II (for Economics majors) or equivalent.

Techniques for counting and enumeration including generating functions, the principle of inclusion and exclusion, and Polyacounting. Graph theory. Modern algorithms and data structures for graph-theoretic problems.

**MATH-UA 248 Theory of Numbers (offered fall term) – 4 points**

**Prerequisite:**
A grade of C or higher in MATH-UA 122 Calculus II or MATH-UA 212 Math for Economics II (for Economics majors) or equivalent.

**MATH-UA 250 Mathematics of Finance (offered in the fall and spring terms) – 4 points**

**Prerequisite:**
A grade of C or higher in MATH-UA 123 Calculus III and one of the following: MATH-UA 233 Theory of Probability, MATH-UA 235 Probability and Statistics, ECON-UA 18 Statistics, or ECON-UA 20 Analytical Statistics and/or permission of the instructor.

Introduction to the mathematics of finance. Topics include: Linear programming with application to pricing. Interest rates and present value. Basic probability, random walks, central limit theorem, Brownian motion, log-normal model of stock prices. Black-Scholes theory of options. Dynamic programming with application to portfolio optimization.

**MATH-UA 251 Introduction to Mathematical Modeling (offered in the fall and...**
spring terms) – 4 points

**Prerequisite:**
A grade of C or higher in MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) or permission of the instructor.

Formulation and analysis of mathematical models. Mathematical tools include dimensional analysis, optimization, simulation, probability, and elementary differential equations. Applications to biology, economics, and other areas of science. The necessary mathematical and scientific background is developed as needed. Students participate in formulating models as well as in analyzing them.

**MATH-UA 252 Numerical Analysis (offered spring term) – 4 points**

**Prerequisite:**
A grade of C or higher in both MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) and MATH-UA 140 Linear Algebra or equivalent.

In numerical analysis, one explores how mathematical problems can be analyzed and solved with a computer. As such, numerical analysis has very broad applications in mathematics, physics, engineering, finance, and the life sciences. This course introduces the subject for mathematics majors. Theory and practical examples using Matlab are combined to explore topics ranging from simple root-finding procedures to differential equations and the finite element method.

**MATH-UA 255 Mathematics in Medicine and Biology (offered fall term) – 4 points (Identical to BIOL-GA 1501)**

**Prerequisite:**
MATH-UA 121 Calculus I or MATH-UA 212 Math for Economics II (for Economics majors) and BIOL-UA 11 Principles of Biology I or permission of the instructor.

Intended primarily for premedical students with interest and ability in mathematics. Topics of medical importance using mathematics as a tool, including control of the heart, optimal principles in the lung, cell membranes, electrophysiology, countercurrent exchange in the kidney, acid-base balance, muscle, cardiac catheterization, computer diagnosis. Material from the physical sciences and mathematics is introduced as needed and developed within the course.

**MATH-UA 256 Computers in Medicine and Biology (offered spring term) - 4 points (Identical to BIOL-GA 1502)**

**Prerequisite:**
A grade of C or higher in MATH-UA 255 Mathematics in Medicine and Biology or permission of the instructor.

**Recommendation:**
Familiarity with a programming language. The language used in the course
will be MATLAB, but prior experience with MATLAB is not required.

Introduces students to the use of computer simulation as a tool for investigating biological phenomena. The course requirement is to construct three computer models during the semester, to report on results to the class, and to hand in a writeup describing each project. These projects can be done individually, or as part of a team. Topics discussed in class are the circulation of the blood, gas exchange in the lung, electrophysiology of neurons and neural networks, the renal countercurrent mechanism, cross-bridge dynamics in muscle, and the dynamics of epidemic and endemic diseases. Projects are normally chosen from this list, but may be chosen otherwise by students with other interests.

**MATH-UA 262 Ordinary Differential Equations (offered in fall and spring terms) – 4 points**

*Prerequisite:*
A grade of C or higher in both MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) and MATH-UA 140 Linear Algebra or equivalent.

A first course in ordinary differential equations, including analytical solution methods, elementary numerical methods, and modeling. Topics to be covered include: first-order equations including integrating factors; second-order equations including variation of parameters; series solutions; elementary numerical methods including Euler's methods, Runge-Kutta methods, and error analysis; Laplace transforms; systems of linear equations; boundary-value problems. Some optional topics to be chosen at the instructor's discretion include: nonlinear dynamics including phase-plane description; elementary partial differential equations and Fourier series.

**MATH-UA 263 Partial Differential Equations (offered in the fall and spring terms) – 4 points**

*Prerequisite:*
A grade of C or higher in MATH-UA 262 Ordinary Differential Equations or equivalent.

Many laws of physics are formulated as partial differential equations. This course discusses the simplest examples, such as waves, diffusion, gravity, and static electricity. Non-linear conservation laws and the theory of shock waves are discussed. Further applications to physics, chemistry, biology, and population dynamics.

**MATH-UA 264 Chaos and Dynamical Systems (offered spring term) – 4 points**

*Prerequisite:*
A grade of C or higher in both MATH-UA 122 Calculus II or MATH-UA 212 Math for Economics II (for Economics majors) and MATH-UA 140 Linear Algebra or equivalent.
Topics include dynamics of maps and of first-order and second-order differential equations: stability, bifurcations, limit cycles, and dissection of systems with fast and slow timescales. Geometric viewpoint, including phase planes, is stressed. Chaotic behavior is introduced in the context of one-variable maps (the logistic), fractal sets, etc. Applications are drawn from physics and biology. Homework and projects are assigned, as well as a few computer lab sessions. (Programming experience is not a prerequisite.)

**MATH-UA 270 Transformations and Geometries (offered fall term) – 4 points**

**Prerequisite:**
A grade of C or higher in MATH-UA 122 Calculus II or MATH-UA 212 Math for Economics II (for Economics majors) or equivalent.

**Strongly recommended:**
A grade of C or higher in MATH-UA 140 Linear Algebra

**NOTE:** Not open to Math Majors, this course is for Math Education Majors only.

This is a thorough course in planar Euclidean geometry. Emphasis is placed on development of students’ proof-writing and problem-solving skills. It begins with a study of the basic structures (e.g., angles, lines, arcs) and concepts (e.g., construction, congruence, similarity) known to Euclid and builds toward modern results. The second half of the course will focus on isometries of the plane, their classification, and applications of complex numbers and conformal maps to geometry. Time permitting, contrasts will be made with some non-Euclidean geometries.

**MATH-UA 282 Functions of a Complex Variable (offered spring term) – 4 points**

**Prerequisite:**
A grade of C or higher in both MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) and MATH-UA 140 Linear Algebra or equivalent.

**MATH-UA 325 Analysis (offered in fall and spring terms) – 4 points**

**Prerequisite:**
A grade of C or higher in MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) and MATH-UA 140 Linear Algebra or equivalent.

This course is an introduction to rigorous analysis on the real line. Topics include: the real number system, sequences and series of numbers, functions
of a real variable (continuity and differentiability), the Riemann integral, basic
topological notions in a metric space, sequences and series of functions
including Taylor and Fourier series.

MATH-UA 328 Honors Analysis I (offered fall term) – 4 points

Prerequisite:
A grade of C or higher in MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) and MATH-UA 140 Linear Algebra or equivalent.

Recommended:
Intensive calculus versions MATH-UA 221 Honors Calculus I and MATH-UA 222 Honors Calculus II.

This is an introduction to the rigorous treatment of the foundations of real
analysis in one variable. It is based entirely on proofs. Students are expected
to know what a mathematical proof is and are also expected to be able to
read a proof before taking this class. Topics include: properties of the real
number system, sequences, continuous functions, topology of the real line,
compactness, derivatives, the Riemann integral, sequences of functions,
uniform convergence, infinite series and Fourier series. Additional topics may
include: Lebesgue measure and integral on the real line, metric spaces, and
analysis on metric spaces.

MATH-UA 329 Honors Analysis II (offered spring term) – 4 points

Prerequisite:
A grade of C or higher in MATH-UA 328 Honors Analysis I, or grade of A in MATH-UA 325 Analysis in conjunction with permission by instructor.

This is a continuation of MATH-UA 328 Honors Analysis I. Topics include:
metric spaces, differentiation of functions of several real variables, the implicit
and inverse function theorems, Riemann integral on R^n, Lebesgue measure
on R^n, the Lebesgue integral.

MATH-UA 343 Algebra (offered fall and spring terms) – 4 points

Prerequisite:
A grade of C or higher in both MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) and MATH-UA 140 Linear Algebra or equivalent.

Strongly recommended:
MATH-UA 325 Analysis

Introduction to abstract algebraic structures, including groups, rings, and
fields. Sets and relations. Congruences and unique factorization of integers.
Groups, permutation groups, homomorphisms and quotient groups. Rings and
quotient rings, Euclidean rings, polynomial rings. Fields, finite extensions.

MATH-UA 348 Honors Algebra I (offered fall term) – 4 points

Prerequisite:
A grade of C or higher in both MATH-UA 123 Calculus III or MATH-UA 213 Math for Economics III (for Economics majors) and MATH-UA 140 Linear Algebra or equivalent.  

*Strongly recommended:*

Intensive calculus versions MATH-UA 221 Honors Calculus I and MATH-UA 222 Honors Calculus II and MATH-UA 325 Analysis or MATH-UA 328 Honors Analysis I.

Introduction to abstract algebraic structures, including groups, rings, and fields. Sets and relations. Congruences and unique factorization of integers. Groups, permutation groups, group actions, homomorphisms and quotient groups, direct products, classification of finitely generated abelian groups, Sylow theorems. Rings, ideals and quotient rings, Euclidean rings, polynomial rings, unique factorization.

**MATH-UA 349 Honors Algebra II (offered spring term) – 4 points**

*Prerequisite:*

A grade of C or higher in MATH-UA 348 Honors Algebra I, or grade of A in MATH-UA 343 Algebra in conjunction with permission by instructor.

Principle ideal domains, polynomial rings in several variables, unique factorization domains. Fields, finite extensions, constructions with ruler and compass, Galois theory, solvability by radicals.

**MATH-UA 375 Topology (offered spring term) – 4 points**

*Prerequisite:*

A grade of C or higher in MATH-UA 325 Analysis or permission of the department.

Set-theoretic preliminaries. Metric spaces, topological spaces, compactness, connectedness, covering spaces, and homotopy groups.

**MATH-UA 377 Differential Geometry (offered spring term of even years) – 4 points**

*Prerequisite:*

A grade of C or higher in MATH-UA 329 Honors Analysis II or permission of the department.

The differential properties of curves and surfaces. Introduction to differential manifolds and Riemannian geometry.

**MATH-UA 393 Honors I (offered fall term of even years) – 4 points**

*Prerequisite:*

Honors standing or approval of the director of the honors program.

A lecture/seminar course on advanced topics. Topics vary yearly and are updated from time to time. Detailed course descriptions are available during preregistration.
MATH-UA 394 Honors II (offered spring term of odd year) – 4 points
Prerequisite:
Honors standing or approval of the director of the honors program.

A lecture/seminar course on advanced topics. Topics vary yearly and are updated from time to time. Detailed course descriptions are available during preregistration.

MATH-UA 397 Honors III (offered fall term of odd years) – 4 points
Prerequisite:
Honors standing or approval of the director of the honors program.

A lecture/seminar course on advanced topics. Topics vary yearly and are updated from time to time. Detailed course descriptions are available during preregistration.

MATH-UA 394 Honors IV (offered spring term of even year) – 4 points
Prerequisite:
Honors standing or approval of the director of the honors program.

A lecture/seminar course on advanced topics. Topics vary yearly and are updated from time to time. Detailed course descriptions are available during preregistration.

MATH-UA 997, 998 Independent Study – 2 or 4 points per term
Prerequisite:
Permission of the department.

To register for this course, a student must seek out a faculty sponsor and draft a brief research proposal to be approved by the director of undergraduate studies.

XII. Graduate Courses Open to Undergraduates

Any undergraduate student, who is interested in enrolling in a Graduate Level Math Course, must complete the Graduate Math Course Registration Request Form found on the Math Department website.

In order to qualify for enrollment in any graduate level math course, students must meet the following requirements:

1. Undergraduate Math Major or related field who is an NYU Washington Square Student
2. Successful completion of MATH-UA 325 Analysis / MATH-UA 328 Honors Analysis I with a grade of A- or higher
3. Math Major GPA of 3.65 or higher

(You can find your major GPA in the Academic Requirements Report in your
Albert Student Center drop down menu. The major GPA will be located at the bottom of the Math Major Requirements section.

Students who do not meet the above requirements and would like to petition to enroll in a graduate course should still complete the Graduate Math Course Registration Request Form, and must complete the “Special Permission Request” box at the end of the form.

**Graduate Course Enrollment Policies:**

- Students may enroll in a maximum of two graduate courses per semester. You can submit one course request per form. If you would like to request enrollment in two courses, please submit the Graduate Math Course Registration Request Form twice, once for each course.
- Undergraduate students are not allowed to enroll in MATH-GA Advanced Topics courses unless given special permission.
- MATH-GA courses do not count towards the Restricted/Advanced Electives portion of the Math Major.
- Honors Math Majors cannot count MATH-GA courses towards the four required honors level courses. The four honors level courses must be MATH-UA Honors courses.
- Registration requests will be reviewed by the Math Department and Vice Chair Matthew Leingang.
- Students will receive a follow-up email within two weeks of completing the form. Please wait until you receive your follow-up email before asking any questions regarding your request(s).
- During registration time, students are advised to enroll in undergraduate course selections first, which can later be swapped for graduate math course requests if approved.

**Graduate Course Options and Prerequisites**

To view a complete list of graduate math courses available to undergraduate students and their prerequisites, click here. Prerequisites listed are in addition to the above requirements.

Any questions regarding the Graduate Math Course Registration Request Form, or the process of requesting graduate math course enrollment, should be directed to the Undergraduate Program Administrator, Alison Entin at entin@cims.nyu.edu.

Students who are studying abroad in NY from NYU Shanghai should not complete the Graduate Math Course Registration Request Form and must follow the Shanghai enrollment request policies. Any questions about these policies should be directed to NYU Shanghai Global Affairs at shanghai.globalaffairs@nyu.edu.
XIII. Departmental Faculty

Scott Armstrong. Associate Professor of Mathematics B.S. Texas A & M University 2002, University of California, Berkeley Ph.D. 2009 Research interests: Partial differential equations, probability theory, and stochastic homogenization

Tim Austin. Assistant Professor. PhD. 2010, University of California, Los Angeles. Research interests: analysis, probability and ergodic theory.

Afonse Bandeira Assistant Professor. B.S.,University of Coimbra, Portugal, 2009 M.S., University of Coimbra, Portugal, 2010.. Ph.D., Princeton University, 2015 Applied mathematics, optimization, probability, information theory, signal processing, mathematics of data science

Antoine Cerfon. Assistant Professor of Mathematics. Magnetohydrodynamics in fusion and astrophysical plasmas, nonneutral plasmas, kinetic theory in plasmas and rarefied gases.

Aleksandar Donev. Assistant Professor of Mathematics. Multi-scale (hybrid) methods; fluctuating hydrodynamics; coarse-grained particle methods; jamming and packing

Dimitris Giannakis. Assistant Professor, Ph.D. 2009, University of Chicago. Research interests: Atmospheric dynamics, climate variability, stochastic modeling.

Bruce Kleiner. Professor. Research interests: Geometric analysis, geometric group theory and geometric evolution equations.

Matthew Leingang. Vice Chair for Undergraduate Studies, Clinical Associate Professor. Ph.D.
2000, Harvard; Research interests: Mathematics Education, Web Pedagogies, differential geometry

Alena Pirutka. Assistant Professor. Ph.D. 2011, Université Paris-Sud XI, Orsay. Research interests: arithmetic and algebraic geometry, number theory.

Aaditya Rangan. Assistant Professor. B.A. 1999, Dartmouth; Ph.D. 2003 California (Berkley). Research interests: large-scale scientific modeling of physical biological, and neurobiological phenomena.

interests: computational neuroscience, nonlinear dynamics of neurons and neural circuits, sensory processing.

Leif Ristroph. Assistant Professor of Mathematics. Research Interests: Fluid dynamics, non-linear dynamics, experimental physics, biophysics, and geophysics.

Mutia Sondjaja. Clinical Assistant Professor. B.A. 2008, Harvey Mudd College; Ph.D. 2014, Cornell University. Research interests: Optimization; interior-point methods; operations research.

K.R. Sreenivasan. Professor of Physics and Mathematics; Senior Vice Provost, NYU; Research interest: turbulence, complex fluids, cryogenic helium and nonlinear dynamics.

Elizabeth Stepp. Clinical Assistant Professor; B.S. 1992 Vanderbilt, M.S. 1996 Middle Tennessee State University; Ph.D. University of Kentucky.

Margaret H. Wright. Silver Professor of Computer Science and Mathematics Optimization; scientific computing; linear algebra.

Ofer Zeitouni Global Distinguished Professor of Mathematics

Jun Zhang. Professor. B.S. 1985, Wuhan University (China); Ph.D. 1994, University of Copenhagen. Research interests: fluid dynamics, biophysics, complex systems.

Denis Zorin. Professor of Computer Science and Mathematics Computer graphics; geometric modeling; subdivision surfaces; multiresolution surface representations; fluid and solid simulation; perceptually based methods for computer graphics.
